Who?
With whom?

What?
What sort of content?

External communication

clients
involved parties
forensic experts
business partners

contracts, legal opinions, notification of possible cases of contracts / legislation breach

What solution you look for

Simple encryption of e-mails, files and folders on PC

Possibility of limitation of sending personal data in an insecure way

Digital signature - confirmation of sender identity

Fast implementation and inexpensive infrastructure

Access denial to messages in case of an employee leaving or partner changing

Full user control over the system running

Time limitation of access to messages

Free of charge content decryption by an external recipient without the need of installation or registration

Assurance of message not being read by anyone other than the sender and the recipient

If you send anything by an e-mail,
you would not write onto a postcard,
encrypt it.

Your e-mail, as well as a postcard can be read by whoever going by.

3 reasons why encryption with Talkey is the most safest way of e-mail communication

1 Guarantee your identity

Encrypted message by Talkey guarantees the origin, the authorship and the stability of a message. Your clients and partners know that they should open only encrypted e-mails received from you, which protect them from cheated message, which will misuse your company domain. You, on the other hand, know that you are taking every step possible for protecting your client's data and therefore preventing court cases, financial losses and the loss of reputation.

2 Be in control over the way how the recipient will treat your message

Set what the recipient can or cannot do with your message. Protect information and data sent by e-mails. For instance, you can prohibit the recipient from forwarding your message, determine how many times or how long for the message can be opened, until it is invalid and therefore impossible to decrypt.

these advanced features will help you with that

3 Take really back a wrongly sent e-mail

Do you know that, in reality, a common e-mail client can not delete an e-mail, even though you click on "take back" button? Such e-mail will stay hanging in between the servers and could be read by anybody, basically. Talkey enables to make a sent e-mail invalid, which means, that the e-mail could not be opened neither by the recipient or anyone else.

disable the recipient's ability to forwarding your message

set the number of times the message can be opened

limit the amount of time your message to be visible

do not allow the message to be displayed on mobile device
